Hiring Team
Stripe

Subject: Application for Software Engineer Intern

Dear Hiring Team,

I am excited to apply for the Software Engineer Intern position at Stripe. As a recent B.Tech graduate in Computer Science (AI & ML) from SR University, I have developed a strong foundation in software engineering through building full-stack applications using Python, Django, React (Next.js), SQL, and REST APIs.

Throughout my projects, I focused on designing scalable and practical software systems rather than simply implementing features. I developed an AI-powered Smart Placement Platform, a Healthcare Appointment System, and OpsHub—an enterprise operations platform featuring JWT authentication, role-based access control, project management, ticket tracking, and analytics dashboards. These projects strengthened my understanding of backend architecture, API design, authentication, database management, and responsive frontend development.

What attracts me to Stripe is its engineering culture, emphasis on writing reliable software at scale, and commitment to solving complex technical problems that impact millions of businesses worldwide. I am eager to learn from experienced engineers while contributing with curiosity, strong problem-solving skills, and a willingness to take ownership of meaningful work.

I enjoy building products that improve user experiences and continuously challenge myself to learn modern technologies and engineering best practices. I believe my hands-on development experience, passion for software engineering, and enthusiasm for learning would allow me to contribute effectively as a Software Engineer Intern at Stripe.

Thank you for considering my application. I would be grateful for the opportunity to discuss how my skills and experiences align with your team. I look forward to hearing from you.

Sincerely,

Pingili Nivedh Reddy
